## BE-01

Dwarf bean. Yellow round pod. Fleshy and stringless. Vigorous plant with an extended harvest period. seed color have white and black.

## BE-02

Dwarf bean type with many different variety, fine group . A good cover of foliage protects the pods from the strong sunlight. The production of beans is very concentrated. The round, straight pods are dark green . Resistant to BCMV and anthracnose.

## BE-03

Dwarf bean, yellow flat pod. 7-8cm. Good content . Very productive variety with high marketable value

## BE-2010

Pool bean A good cover of foliage protects the pods from the strong sunlight. The production of beans is very concentrated. The round, straight pods are dark green and about 11-13 cm. in length. Resistant to BCMV and anthracnose

## BE-2011

Pool bean with vigorous plant. High yields concentrated harvesting. straight round pod are green color.

## BE-2012

Moderately vigorous plant which will stand cool temperatures and will germinate at 16 to 18 c: this means that it is best sown as early in the spring as soil temperatures will allow. because of the coloration of the pods it is not suitable for production during the height of the summer. It is also suitable for autumn sowing. The beans are light cream , with brilliant red stripes.
