squash

20-1ZU

Voal type, Green color.Vigorous plant, upright habit, easy harvest and accessible ,Very productive and high quality fruits.good setting.

Resistance: ZYMV, CMV

20-2ZU

A uniform, highly productive Vigorous plants, with good leaf coverage. Fruits are 14-16 cm in length, green with a white fleck. Very easy to pick. Maturity is approximately 52 days after direct seeding. Intermediate resistance to Zucchini Yellow Mosaic Virus and Watermelon Mosaic Virus.

20-3ZU

The variety of zucchini with bright green, oil and fine pattern is introduced, which grows well, grows early, leaves are short, light permeability is good, the ability of continuous knot under low temperature and weak light is strong, and the yield is high. Strong disease resistance, melon length of about 26cm, the transverse diameter of about 7cm, fine pattern, bright green, long light feeling

20-4ZU

Hybrid generation, unlimited growth type, strong plants, upright single vine, short internodes, high ratio of male and female flowers, continuous ability to sit melon, high yield. Melon strips emerald green, spot spot, columnar, length of about 23cm, diameter of about 7cm, smooth, straight melon, long handle, flower umbilicus small, flower attachment time long, melon meat organization, storage and transportation resistance, good commodity. Low temperature resistance, resistance to watermelon Mosaic virus, cucurbit virus and powdery mildew. Suitable for early spring, late autumn and winter cultivation.

20-5ZU

Early maturity, The plants are vigorous and the foliage carried erect for easy harvesting. The potential is for an abundant production of high quality fruits 16-18cm. Long at optimum harvest size. Resistance to WMV, PM.

squash

20-6ZU

This variety grows moderately, with short internodes and ascending leaves. Each has a melon, melon cylindrical, 20-25 cm long, 6-8 cm thick, smooth and delicate skin. Resistance to powdery mildew, viral disease and blight, bacterial keratosis

20-7ZU

Zucchini variety. Vines 50-70 cm long; The segments of melon are 5-7, the leaves are palmately shaped and deeply engraved, the leaves are dark green with silver spots, the fruit is long and round, yellow after maturity, and the skin is hard; A single melon weighs between 2.5 and 3.5 kilograms. Seeds oblong, milk white kernel dark green, 1.3 cm long, 1.1 cm wide, 100 grains weigh 17 grams. Crude protein 31.04%, crude fat 43.27 %. The breeding period is 115 days. Resistance to powdery mildew.

20-9ZU

The plant belongs to dwarf seedling type. Precocious growth potential, strong adaptability to low temperature and weak light. the fruit is long and club shaped with dark green skin. cultivation key points. It is suitable for early maturing in protected and open fields. According to the facilities conditions of different protected areas.

squash

20-10ZU

20-10 ZU is hybrid round type. Early cycle adapt for the greenhouse and for the open field cultivations. High productivity plants. Erect and vigorous, fruits are round, light green slightly ribbed. Suited to fresh market, Resistance to CMV.PM.

20-11ZU

Early maturing high - grade hybrid new variety of zucchini, plant upright open type. Leather oil green, good commercial property. It is suitable for planting in early spring and late autumn. 5~7 days after flowering, fruit setting ability, resistance to zucchini Mosaic disease

20-12ZU

Early maturing, short tendrils, 45 ~ 50 days after sowing can be harvested. Plants erect, vigorous, single main vine, leaves dark green, with silver spots. Melon length 18 ~ 20 cm, melon color black green, color uniform, cylindrical, dense melon meat, good commodity. Wide adaptability, resistance to Mosaic virus, powdery mildew and downy mildew. Suitable for processing

squash

20-13ZU

Early maturing high - grade hybrid new variety of zucchini, plant upright open type. Leather oil green, good commercial property. The fruit can be harvested in 35~38 days after sowing. It is suitable for planting in early spring and late autumn. 5~7 days after flowering, single melon weight up to 300 grams, melon code density, fruit setting ability, resistance to zucchini Mosaic disease

20-14ZU

A hybrid generation of zucchini introduced from the Netherlands. Good precocity, maturity period of about 40-45 days, melon nearly cylindrical, melon strip length of about 20-24 cm, suitable for small melon, (about 500 grams), melon surface green, bright and tender, not easy to become white under high temperature. Strong disease resistance, virus resistance, excellent heat resistance. It is suitable for crop cultivation in north China, northwest China and southwest China.

20-15ZU

20-15 ZU is a high antiviral variety of zucchini. This variety has strong growth, compact plant type, early maturity and strong fruiting ability. Young fruit tender green luster, melon about 22 cm long, fruit stalk short, single melon weight 400~600 grams. The outstanding advantages of "20-15ZU" are fast bulking fruit, fruity melon shape, strong antiviral ability, high yield. This breed is suitable for spring big (small) arch shed, autumn open field.

squash

20-16ZU

Characteristics of zucchini with green, glossy and fine pattern
The variety of zucchini with bright green, oil and fine pattern is introduced, which grows well, grows early, leaves are short, light permeability is good, the ability of continuous knot under low temperature and weak light is strong, and the yield is high. Strong disease resistance, melon length of about 26cm, the transverse diameter of about 7cm, fine pattern, bright green, long light time, the melon still bright green. Suitable for winter greenhouse and early spring hanging seedlings in the north

20-17ZU

20 - 17ZU is An early, high yielding golden yellow fruits. Fruits are smooth, cylindrical in shape, 18-20 cm in length and are well concentrated on a compact plant, which has an open growth habit. The tender, creamy white flesh has excellent flavour and is tastiest when picked early. Maturity is 53 days from direct sowing.

20-18ZU

20-18ZU Hybrid squash banana type. Especially early maturity, growth potential is strong, disease resistance, good high out put. This variety for autumn and spring production special varieties. Growth potential is strong, branching medium, Lord tendrils knot melon, continuous fruit-set ability.
